# 1. Windows cold wallet guide

- 1.1 Download the latest Insifa Windows wallet (Download wallet only from the official github for safety!)

Windows wallet : <https://github.com/Insifa/insifa/releases/download/v1.0.0/insifa-1.0.0-win32.zip>

- 1.2 How to make your own Insifa address

**Figure 1.**

- a) Click the 'Receive' tab (green box)
- b) Type in your wallet label (orange box)
- c) Click 'Request payment' (red box)
- d) Now your new wallet address is created (Fig. 2)
  - ▶ You can copy address by clicking 'Copy Address' tab

**Figure 2.**

### (Optional) How to reveal specific amount of coin for each address

Go to Settings → Options → Wallet

a) Check 'Enable coin control features'

► Coin amount will be displayed at 'Send' tab → Inputs

### - 1.3 How to send ISF

a) Click 'Send' tab

#### SEND

##### Coin Control Features

**Open Coin Control...** Coins automatically selected

Custom change address

Split UTXO  UTXO Size: 0 ISF

**Pay To:**

**Label:**

**Amount:**  ISF ▼

b) Type in Receiver's address in 'Pay To' (red box)

c) Type in amount of ISF to send (green box)

d) Click 'Send' (orange box)

SwiftTX Confirmation time: normal

(Smart fee not initialized yet. This us

**Transaction Fee:** 0.00010000 ISF/kB

Figure 3.

### - 1.4 Encrypting Windows wallet

Go to Settings → Encrypt Wallet → Insert password twice

(Reminder: Never forget or lose your password!)

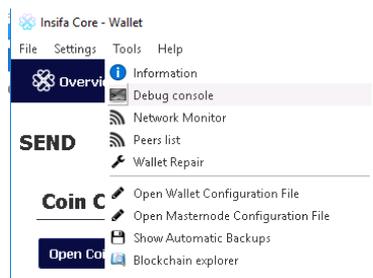

## 2. MasterNode setup guide

### - 2.1 Make new address for Masternode (Refer to step 1.2 for guidance)

### - 2.2 Send exactly '5000 ISF' to address which is made in step 2.1 (Refer to step 1.3 for guidance)

▶ It will automatically include fee, so you just need to type 5000 at 'Amount'

### - 2.3 Get privkey, TxHash and Output index

Go to Tools → Debug console

a) Type in 'masternode genkey', (copy & paste the result in notepad)

```
11:35:41  [G] masternode genkey
11:35:41  [G] 22qzcosP2E1X4FTu5G7pNmsHVGA4zkezgpmnuQezz7ug2jWuLCE
```

b) Type in 'masternode outputs', (copy & paste the result in notepad)

▶ Result shows "TxHash" : "Output index"

Figure 4.

```
11:38:51  [G] masternode outputs
11:38:51  [G] {
    "txhash": "e4724dd79da19dce94863624c0f7e71c8e92bbe43b7a158af266307e9fa0b62c",
    "outputidx": 1
}
```

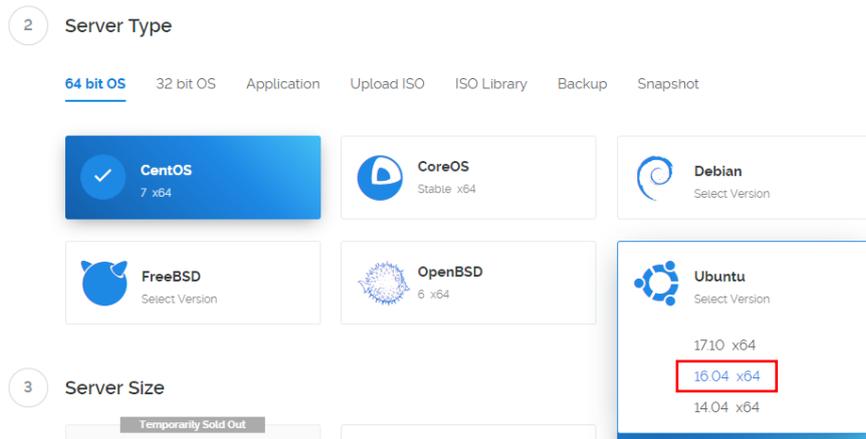

Error: If you get a result like this, it means that there are no wallets containing 5000 ISF

```
11:38:51  [G] masternode outputs
11:38:51  [G] {
}
```

### - 2.4 Purchase VPS (Vultr is used for this tutorial, <https://goo.gl/9TSmQF>)

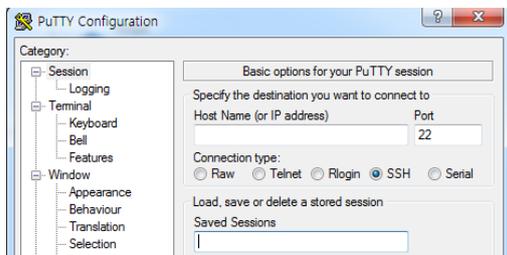

Deploy new server → Server type (64 bit OS → Ubuntu 16.04 x64) → Server size (5\$/mon)

→ Type in server host name → Click 'Deploy now'

**Figure 5**

### - 2.5 Download PuTTY from the internet and login to VPS

**Figure 6**

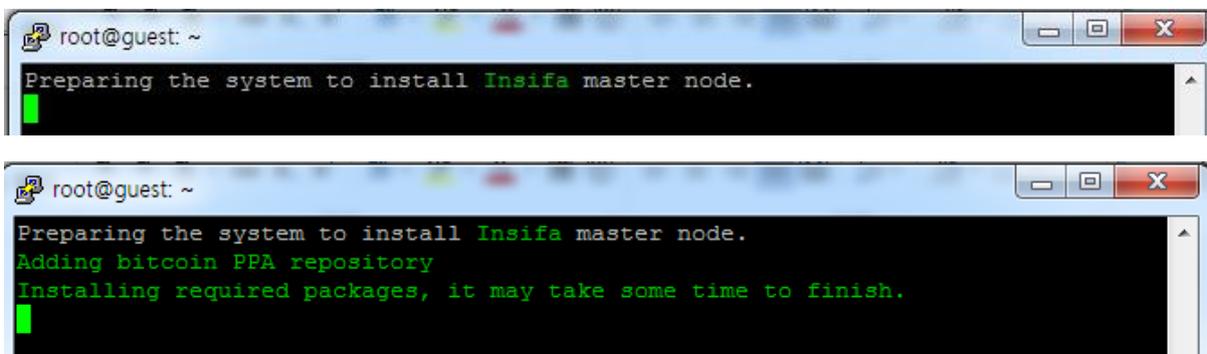

- a) Type in your VPS IP address (refer step 2.4)
- b) Click 'open'
- c) Click 'yes' when PuTTY Security alert pops out
- d) Type in 'root' at PuTTY window
- e) Copy password from vultr, right click on the PuTTY
  - ▶ Actual password will be hidden

### - 2.6 Install Linux daemon and Masternode at VPS

Copy and paste (right click at PuTTY) the line below, and press enter.

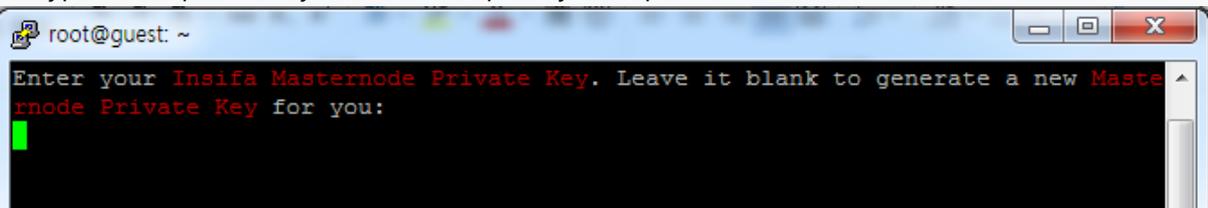

```
wget -q https://raw.githubusercontent.com/Insifa/insifa/master/insifa\_mn.sh && bash insifa_mn.sh
```

It will automatically build a masternode.

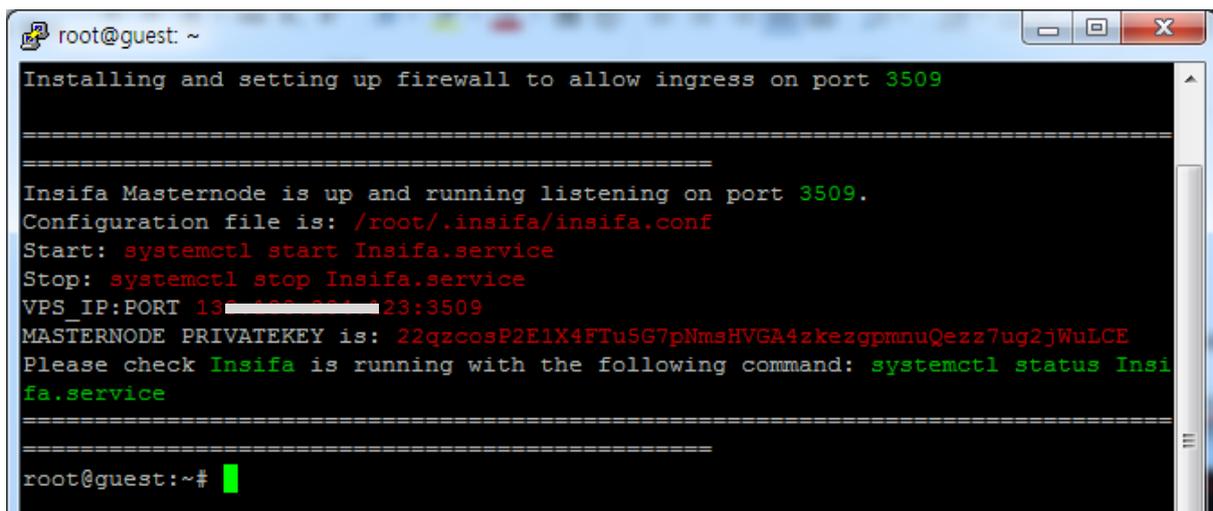

Wait until you see the screen same as below. (It make take some time to finish)

- ▶ Type in the private key (refer 2.3 (a), privkey) and press enter.

```
root@guest: ~  
Enter your Insifa Masternode Private Key. Leave it blank to generate a new Masternode Private Key for you:  
█
```

- ▶ Once you see the following pop-up window, Masternode setup(for VPS side) is finished!

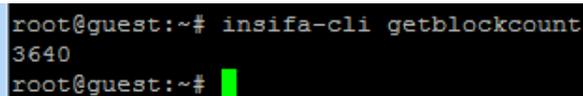

```
root@guest: ~  
Installing and setting up firewall to allow ingress on port 3509  
=====
```

```
Insifa Masternode is up and running listening on port 3509.  
Configuration file is: /root/.insifa/insifa.conf  
Start: systemctl start Insifa.service  
Stop: systemctl stop Insifa.service  
VPS_IP:PORT 13[redacted]23:3509  
MASTERNODE PRIVATEKEY is: 22qzcosP2E1X4FTu5G7pNmsHVGA4zkezgpmnuQezz7ug2jWuLCE  
Please check Insifa is running with the following command: systemctl status Insifa.service  
=====
```

```
root@guest:~# █
```

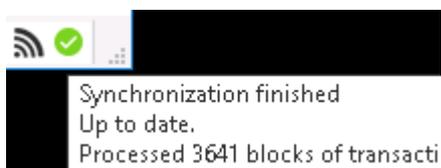

Wait until daemon gets the block. You can see block height using following command.

```
insifa-cli getblockcount
```

```
root@guest:~# insifa-cli getblockcount  
3640  
root@guest:~# █
```

Wait until it matches with windows wallet (fully synchronized)

```
Synchronization finished  
Up to date.  
Processed 3641 blocks of transacti
```

(Optional) How to check if VPS is working properly

- 1) Type in the following in PuTTY

```
systemctl status Insifa.service
```

- Once you see the following, VPS is running fine

```
root@guest:~# systemctl status Insifa
● Insifa.service - Insifa service
   Loaded: loaded (/etc/systemd/system/Insifa.service; enabled; vendor preset: e
   Active: active (running) since Wed 2018-12-19 11:59:20 UTC; 22min ago
   Main PID: 10700 (insifad)
   CGroup: /system.slice/Insifa.service
           └─10700 /usr/local/bin/insifad -daemon

Dec 19 11:59:20 guest systemd[1]: Starting Insifa service...
Dec 19 11:59:20 guest insifad[10696]: Insifa server starting
Dec 19 11:59:20 guest systemd[1]: Started Insifa service.
lines 1-10/10 (END)
```

- 2) Type in the following in PuTTY

```
insifa-cli masternode status
```

```
root@guest:~# insifa-cli masternode status
{
  "txhash": "e4724dd79da19dce94863624c0f7e71c8e92bbe43b7a158af266307e9fa0b62c",
  "outputidx": 1,
  "netaddr": "139.128.204.123:3509",
  "addr": "F6Bfu6Bwn1XAA4FoP6xM7BL4hx3dbpD6dm",
  "status": 4,
  "message": "Masternode successfully started"
}
root@guest:~#
```

"message" : "Masternode successfully started" -> You are good

If you see this message below, you have to start masternode at your windows wallet.

```
root@guest:~# insifa-cli masternode status
error code: -1
error message:
Masternode not found in the list of available masternodes. Current status: Not c
apable masternode: Hot node, waiting for remote activation.
root@guest:~#
```

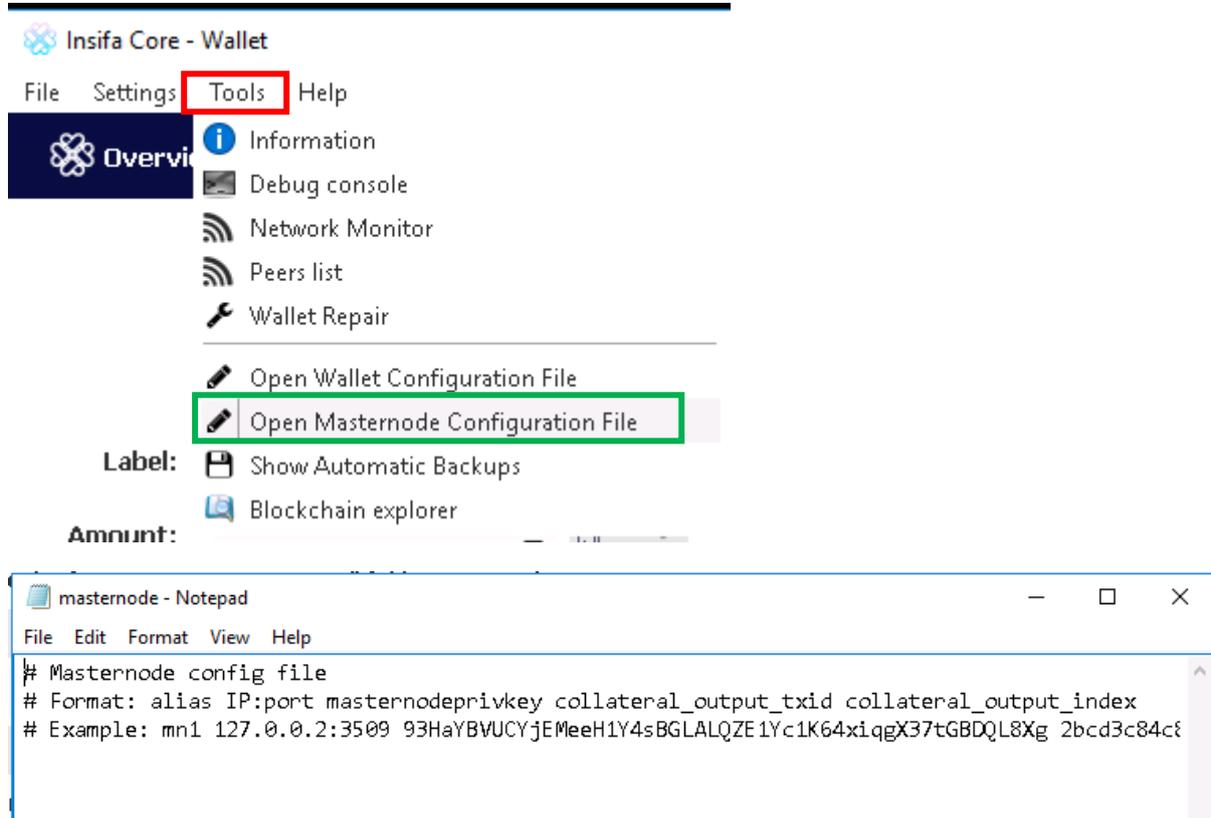

Also, if you want to start/stop Insifa, run one of the following commands as root:

```
systemctl start Insifa
systemctl stop Insifa
```

## 2.7 Setup the Masternode at Windows wallet

a) Open masternode configuration file

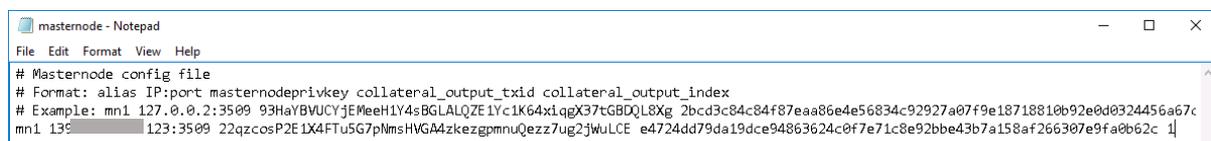

Go to Tools -> 'Open Masternode Configuration File' (open with notepad program)

b) Type in the following command (red part should be changed to your own values, spaces must be included)

mn1 **SERVERIP:3509 PRIVKEY(refer 2.3a) TXID(refer 2.3b) OUTPUT\_INDEX(refer 2.3b)**

► Example

c) Save 'masternode.conf', and restart the Windows cold wallet (and wait for the sync process)

► Click the 'Masternode' tab → Masternode status will be shown as 'MISSING' for now

Alias	Address	Protocol	Status	Active
mn1	139.180.204.123:3509	-1	MISSING	00m:00s

- d) Wait until your 5000 ISF transaction gets more than 15 confirmations.
- e) Click your Masternode and click 'Start alias' button below (Unlock the wallet first, if it's encrypted)
  - ▶ Once you see the following pop-up window, Masternode setup is finally finished!
